PROFESSIONAL SUMMARY

Software Engineer with a B.S. in Computer Science and strong proficiency in building enterprise-grade, user-focused UI systems. Highly skilled in front-end architecture using Angular (v14-v18), JavaScript (ES6+), TypeScript (v4/v5), and SCSS, paired with an understanding of REST APIs and Java backends. Adept at accelerating delivery pipelines using Docker, AWS, and AI-driven development practices (prompt engineering, AI-assisted refactoring, and automated testing).

CORE TECHNOLOGIES

Front-End & UI: Angular (v14-v18), JavaScript (ES6+), TypeScript (v4.x/v5.x), RxJS, HTML5, CSS3, SCSS, Responsive Design, UI/UX
Testing & Automation: Cypress, Playwright, Test Automation Frameworks, Postman
Back-End & Cloud: Node.js, Express.js, Java (Core basics), REST APIs, Supabase, PostgreSQL, MongoDB, AWS (EC2, S3, Lambda), Docker
Engineering Workflow: AI-Assisted Coding, Prompt Engineering, CI/CD, Cloudflare, Git, Agile Methodologies

SOFTWARE ENGINEERING EXPERIENCE

Software Engineer | Astral Veil (Independent Product Development) May 2024 - Present

- Designed, built, and scaled a public full-stack web application, implementing clean, modular JavaScript (ES6+) and SCSS to support 800+ active visitors.
- Developed intuitive, responsive user interfaces and interactive customer-focused workflows using TypeScript v5.x, optimizing cross-device page speeds and rendering.
- Leveraged AI-assisted coding tools and prompt engineering to accelerate debugging, execute critical code refactoring, and generate unit tests, thoroughly evaluating AI outputs to ensure performance and quality.
- Engineered secure user authentication workflows using Supabase and PostgreSQL Row Level Security (RLS) to safeguard platform data.
- Collaborated with cross-functional testers and business logic requirements to convert static visual models into database-backed production features.
- Managed source control, QA verification, and environment deployments via automated pipelines on GitHub and Cloudflare.

SELECTED PROJECTS

Enterprise MEAN Stack Application

- Engineered a secure, cloud-aligned web application using Angular 17 and TypeScript 5.x for the front end, managing complex state and UI rendering. Interfaced directly with a Node.js/Express REST API and MongoDB backend to process data dynamically with JavaScript (ES6+).

Containerized Cloud-Based Microservice App

- Built and hosted a scalable web application leveraging AWS (S3, EC2, Lambda, IAM). Containerized services utilizing Docker to establish consistent build environments and seamless deployment pipelines.

Commercial Web Platform & Branding Sync

- Delivered a high-performance web platform for a local business, collaborating on end-to-end UI/UX architecture to enhance customer experiences and ensure fully accessible responsive layouts built on JavaScript (ES6+).

PROFESSIONAL EXPERIENCE

Warehouse Operations Associate | Wesco Feb 2024 - Present

- Collaborate daily in agile, fast-paced logistics environments, maintaining precision and efficiency across cross-functional team workflows.
- Dedicate hours outside operational schedules to independently design, test, and write code for production-grade software solutions.

EDUCATION

B.S. Computer Science | Southern New Hampshire University Graduated: June 2025
